|---|-----------------|--------------|
| One solution is to use an excavator to pull apart the fire and transport the hot material to a suppression deck away from the area where the load could be doused with water. | Todd Thalhammer |              |
| Use of trenches and foam but said that both of these solutions are “tricky” to work with  | Todd Thalhammer |              |
| Pump Argon into space to replace Oxygen in fire   | (b) (6) citizen |              |
